PP-R PIPES

Maxipipe PP-R

Advantages of Pipes:

- **Easy Installation**
- **High Durability**
- **Resistance**
- **Long Lifetime**
- **Low Heat Loss**

PP-R PIPES

PP-R pipe is a type of pipe specially designed for building interior water transportation systems and is made of PP-R Copolymer material. MaxiPipe PP-R pipes offer an excellent solution for the safe, durable, and long-lasting transportation of water.

MaxiPipe PP-R pipes are manufactured in accordance with the TS EN 15874-2 standard.

Advantages of MaxiPipe PP-R Pipes

High Durability: MaxiPipe PP-R pipes are resistant to chemical corrosive substances, rust and corrosion, high pressure, and impacts. This ensures long-term reliability.

Resistance: They are resistant to rust, corrosion, and chemicals, making them a safe choice for drinking watersystems.

Low Heat Loss: With excellent thermal insulation properties, they minimize heat loss, contributing to energy savings.

Easy Installation: Due to their lightweight and flexible design, MaxiPipe PP-R pipes can be easily installed.

Long Lifespan: MaxiPipe PP-R pipes are long-lasting and require minimal maintenance.

PP-R Composite Pipes

Maxipipe PP-R Composite

Advantages of Pipes:

- **Thermal Elongation Capacity**
- **Durability**
- **High Pressure Capacity**
- **Low Thermal Expansion**
- **Easy Assembly**

PPR COMPOSITE PIPES

MaxiPipe offers the ideal solution for your plumbing needs with its innovative PP-R Composite (Glass Fiber Reinforced) pipes. These pipes have superior advantages compared to traditional plastic pipes.

MaxiPipe Glass Fiber Reinforced PP-R pipes are manufactured in accordance with the TS EN 13715 standard.

Advantages of MaxiPipe PP-R Composite Pipes

Thermal Linear Expansion Coefficient: The thermal linear expansion coefficient of composite pipes is low, which enhances system safety. For example, standard pipes have a value of 0.15 mm/m°K, while composite pipes have a value of 0.035 mm/m°K. A lower expansion coefficient provides greater stability against thermal changes.

Durability: Thanks to their glass fiber reinforced structure, they are long-lasting and durable. They are

resistant to chemical effects and corrosion.

High Pressure Capacity: With their ability to withstand high pressures, they are an excellent choice for industrial and commercial applications.

Low Thermal Expansion: The low thermal expansion coefficient ensures stability against temperature changes in the system, increasing the reliability of the installation.

Easy Installation: With their lightweight design and special connection systems, they are easy to install and require minimal maintenance.

MaxiPipe PP-R Composite (Glass Fiber Reinforced) pipes combine reliability, durability, and efficiency to ensure your plumbing operates smoothly and lasts for years.

PPR PIPE WITH ALUMINUM FOIL

Maxipipe PP-R Aluminum Foil

Advantages of pipes

- **Endurance**
- **High Pressure Capacity**
- **Low Thermal Expansion**
- **Easy Assembly**

PPR PIPE WITH ALUMINUM FOIL

A PPR aluminum foil pipe, also known as a PPR-Al-PPR pipe, is a type of multi-layer composite pipe commonly used in hot and cold water systems, heating installations, and sometimes in air conditioning systems. These pipes typically consist of three layers:

Inner Layer: Made of Polypropylene Random Copolymer (PPR) – this is the part that comes into contact with water. It's hygienic, corrosion-resistant, and safe for drinking water.

Middle Layer: A thin aluminum foil – this layer increases the pipe's temperature and pressure resistance, and more importantly, reduces thermal expansion.

Outer Layer: Another layer of PPR – provides protection against external physical and chemical effects.

Advantages

Low thermal expansion (less bending or sagging compared to pure plastic pipes)

High resistance to heat and pressure

Oxygen barrier structure (important in heating systems to prevent corrosion in metal components)

Easy to install (can be joined by welding)

MaxiPipe PP-R Composite (Glass Fiber Reinforced) pipes combine reliability, durability, and efficiency to ensure your plumbing operates smoothly and lasts for years

Common Applications:

Indoor potable water piping.

Radiator heating systems.

Underfloor heating.

Solar water heating systems.

PP-R Fittings

Maxipipe PP-R

Advantages of Fittings:

- **Easy Assembly**
- **Superior Durability**
- **Variety Options**
- **Excellent Sealing**

PPR FITTINGS

MaxiPipe offers high-quality fittings to ensure reliable and efficient connections in your PP-R pipe systems. MaxiPipe PP-R fittings complement building plumbing systems, contributing to their long lifespan and trouble-free operation.

MaxiPipe PP-R fittings are manufactured in accordance with the TS EN 15874-3 standard, ensuring quality assurance.

Features and Advantages of MaxiPipe PP-R Fittings

Joining Methods:

- Socket Fusion Welding
- Mechanical Threaded Connection

Superior Durability: MaxiPipe PP-R fittings, made from high-quality polypropylene, maintain their durability for years and are resistant to wear.

Easy Installation: MaxiPipe fittings minimize the risk of water or gas leakage with their superior sealing performance

Excellent Sealing: MaxiPipe ek parçaları, üstün sızdırmazlık performansı ile su veya gaz kaçağı riskini en aza indirir.

Variety of Options: With different sizes and types available, they provide suitable solutions for all kinds of projects..

MaxiPipe PP-R fittings guarantee reliability, durability, and performance in your water and gas pipe systems. By offering the quality and efficiency your systems need, they take your projects to the next level.

PE-RT And PE-XB Pipes

Maxipipe PE-RT ve PE-XB
Advantages of Pipes:

- **Easy Installation**
- **High Durability**
- **Environmentally Friendly**
- **Low Attachment Requirement**

PE-RT PIPES

PE-RT pipes are made from Polyethylene of Raised Temperature (a type of polyethylene resistant to high temperatures) and are used primarily for in-building installations, including underfloor heating, and for transporting hot or cold potable water. They are produced according to the TS EN ISO 22391-2 standard. Depending on the application and pipe characteristics, they are available in different options, including EVOH (Oxygen Barrier), with or without casing.

Advantages of Maxpipe PE-RT Pipes:

Easy Installation: Their lightweight and flexible structure allows for easy installation.

High Durability: They are resistant to high pressure and temperature, with excellent chemical resistance.

Environmentally Friendly: They are 100% recyclable at the end of their useful life.

Layered Structure: The oxygen barrier prevents oxygen from entering the pipe, increasing resistance to oxidation and corrosion (sludge formation).

Low Fitting Requirements: With high winding lengths and coil structure, they facilitate easier application and transportation while minimizing the need for additional fittings.

PE-RT PIPE

PE-XB PIPE

PE-XB pipes are made from high-temperature-resistant polyethylene, with crosslinks (Corsslink) formed between molecules during production using the Silane method. These crosslinks enhance the product's resistance to temperature and pressure, as well as extend its lifespan. Depending on the application and pipe characteristics, they are available in different options, including EVOH (Oxygen Barrier), with or without casing. These pipes are used primarily for in-building installations, such as underfloor heating, and for transporting hot or cold potable water. They comply with the TS 10762-2 standard.

Advantages of Maxpipe PE-XB Pipes:

Easy Installation: Their lightweight and flexible structure allows for easy installation.

High Durability: They are resistant to high pressure and temperature, with excellent chemical resistance.

Environmentally Friendly: They are 100% recyclable at the end of their useful life.

Layered Structure: The oxygen barrier prevents oxygen from entering the pipe, enhancing resistance to oxidation and corrosion (sludge formation).

Low Fitting Requirements: With high winding lengths and coil structure, they facilitate easier application and transportation while minimizing the need for additional fittings.

PVC-U Pipe And Fittings

Advantages of
PVC-U Pipes:

- **Durability**
- **High Resistance**
- **Easy Assembly**

PVC-U PRODUCTS

- PVC-U wastewater pipes and fittings ensure the ideal and safe drainage of building foundation and internal wastewater without leakage.
- They are flame-retardant and prevent the spread of fire between floors in the event of a fire.
- Thanks to their smooth inner and outer surfaces, they do not allow the formation of sediment or accumulation.
- They provide ease during installation.
- They have high resistance to sunlight and weather conditions.
- They are resistant to acids, bases, salt solutions, and oxidation. Due to their mold resistance property, they prevent bacterial growth and do not produce odors.
- PVC-U wastewater pipes maintain their physical structure at continuous operating temperatures up to 60°C.
